PROFILE SUMMARY

Motivated Artificial Intelligence undergraduate at SLIIT with hands-on experience in Python-based machine learning, web application development, and mobile app development. Proficient in Python, Java, React.js, React Native, Node.js, and SQL, with a strong foundation in OOP and software engineering principles. Passionate about applying AI and full-stack development skills to solve real-world problems and actively seeking opportunities to grow in a practical environment.

TECHNICAL SKILLS

- Languages: Python, Java, JavaScript, SQL (MySQL)
- Frontend: React.js, React Native
- Backend: Node.js, Express.js
- Databases: MySQL, MongoDB, Supabase
- AI / ML: Scikit-learn, Pandas, NumPy, Supervised & Unsupervised Learning, Model Training & Evaluation
- Core Concepts: OOP, Data Structures & Algorithms, Software Engineering Principles
- Tools & Others: Git, GitHub, VS Code, Google Colab, Postman

PROJECTS

Gem Auction and Bidding System (*Academic Project*)

- Developed a full-stack web application enabling gem listings, live auctions, and competitive bidding among users.
- Built a responsive and interactive frontend using React.js with a smooth bidding interface and real-time updates.
- Implemented backend REST APIs using Node.js and integrated Supabase for database management and user authentication.
- Integrated an AI-based gem price prediction model to provide estimated market values, helping buyers and sellers make informed bidding decisions.

Pet Care Management System (*Academic Project*)

- Built a cross-platform mobile application using React Native and MongoDB to manage pet health records, appointments, and care reminders.
- Designed an intuitive user interface targeting both Android and iOS platforms with smooth navigation.
- Integrated RESTful APIs between the React Native frontend and Node.js backend with MongoDB for flexible data storage.

Event Ticket Booking and Management System (*Academic Project*)

- Designed and implemented a modular desktop application applying OOP principles and clean system architecture.
- Built and optimized a relational database using SQL (MySQL) for efficient ticket and event data management.
- Applied system design, problem-solving, and layered architecture concepts throughout the full development lifecycle.

Web-Based Recruitment Company System (*Academic Project*)

- Developed a structured web application with full database integration and dynamic content management.

- Implemented CRUD operations with backend logic following software engineering best practices and MVC principles.

Machine Learning Mini Project *(Academic Project)*

- Developed and trained a supervised machine learning model on structured datasets with a full preprocessing pipeline.
- Performed feature selection, data cleaning, model evaluation, and performance analysis using Scikit-learn.
- Worked in Google Colab using Python, Pandas, and NumPy for end-to-end model development.

EDUCATION

BSc (Hons) in Information Technology – Specializing in Artificial Intelligence	Oct 2024– Present
Sri Lanka Institute of Information Technology, Malabe, Sri Lanka	
Secondary Education	Jan 2009 – Oct 2022
J/ Uduppiddy Girls' College, Jaffna, Sri Lanka	
Advanced Level – Mathematics (Physical Science Stream)	

LANGUAGES

English – Advanced | Tamil – Native | Sinhala – Intermediate
